**1. A DREAM OF ZULFIKAR MOINUDDIN AHMED**

Some dreams do not come easily. What I will try to explain to my readers is a dream that is still in development, unfortunately derailed a bit, delayed a bit by the Evil Villain, horrible Racial Genocidal Megalomaniac *Bill Gates*. His plot to destroy and murder me and take all my great ideas to pass to his White Order cronies will most likely be unsuccessful, despite the complicity of white people in American Government's sycophantic reverence for him.

Let me lay out the grand idea here. The grand idea is to patch up Universal Human Psychology so that it is a tolerably reasonable natural science, then develop Quantitative Positive Psychology, and then deliver products and services to eight billion human beings and uplift the globe's Life Satisfaction without borders. The idea is to have some private companies in San Francisco to deliver these things.

We need United Nations and United States Government to destroy Bill Gates physically for smooth success since he has been obsessed that I, and my dream, fails and he has no constraints by any law at all in his brutal savage criminal exercise of illegitimate and evil disgusting black magic and US War and US Industrial Powers to mince my flesh in meta – ensuring physical pains and diseased and death. Everyone knows that he's is doing these things, everyone knows that I am a great immortal genius, and yet especially US Government seems comfortable with the situation. It's quite sickening.

Anyway, I wanted to step back from the nitty gritty today a bit and examine my dream. Admittedly they are ambitious dreams.

First, there is the proposition that Psychology can be moved to a Universal Natural Science of Man; second is the proposition that Quantitative Positive Psychology with Universal Human Psychology will yield concrete opportunities to uplift Life Satisfaction globally; third is the proposition that San Francisco is the best place to expand two companies, one is already registered, my Thyself Inc. Bill Gates has been able to starve me of all income thus far, and sabotage my American Dream too. I am owed \$620 million from Finance and he was able to blockade it on totally racial grounds – this is highly toxically against United States Law, but United States Government is comfortable with Bill Gates raping our laws.

I have already examined the technology that would be good for this, a server farm rather than cloud with Mesos running Meteor servers. The technology is not completely trivial but it is Psychology itself that needs more effort. And so I am

pushing myself to produce deeper understanding of the Psychology in the right way. Massive delivery of questionnaire-based services is the way forward.

Then I have structural dreams of selling the enterprise to US Fed or ECB for an IMF-type institution later. But that's if the whole dream is realised.

This is Zulfikar Moinuddin Ahmed's Dream. I don't want other people claiming it's their dream. It took me years of pondering and rumination to produce the right dream, and I dislike poachers of my great dreams.

## 2. MUSIC LISTENING HABITS POWER LAW

I found a beautiful article from 2016 on how music listening habits follow Power Law as follows.

Suppose you have a pool of people  $P$  and you pick  $p \in P$  and you examine what songs they've been listening to for the past five years. Suppose you find that their listening records are

$$(s_j(p), t_j(p))$$

where  $s_j(p)$  is an identifier for the song and  $t_j(p) \in \mathbb{N}$  is the number of times they've heard the song in the past five years. Then the statistics of  $P(T \geq t)$  follows Power Law statistics. This is the 2016 result of [1].

We can interpret this in terms of our Motivated Habituation thesis as well as follows. We think of different songs having an implicit ordering that we do not specify. As we listen more to music, the higher ranking songs repeat more by power law. And this we can interpret as improvement of "skill" by motivated habituation for discernment and taste.

Our interpretation is sensible even without having a known ranking. This is a slightly stretched interpretation. But the interpretation gives us a sense of just how powerful the idea of power law for Motivated Habituation is with something that is not as clearly interpreted as skill improvement as chess playing.

## 3. DAVID HURON'S HABITUATION-FLUENCY THEORY OF MUSICAL FORM

David Huron has a theory published in 2013 about psychology of habituation-fluency about musical form whose elements I will not attempt to detail [2]. I will instead present the theory as an example for handling motivated habituation and intuition growth for universal human behaviour.

I am not interested in the details because the substantial issue here is that there are examples for my major thesis on motivated habituation and transformation of intuition as a result. We are interested in a much broader universal human behaviour theory than specific cases. It is worthwhile ignoring the details for specific cases for this reason, in order to attempt producing a sharp general theory first that is precise.

## 4. ICEK AJZEN 2002 PAPER ON MOTIVATED HABITUATION

I like Icek Ajzen's 2002 paper on motivated habituation. This is good. I am practicing the flapping of the hands in waves indicating "Go do those things". You see, I have a lot of motivated habituation to signal this sort of thing. He did mention some features of motivated habituation, Icek Ajzen. But I am the pioneer suggesting that since roughly 96% of all human behaviour are going to be covered by motivated habituation, that all of Universal Human Psychology ought to be built around it.

Yes, Icek Ajzen, great work, and now go do the whole thing. Zulf is very pleased.  
[3] Yes, this is an extremely important paper, Harvard, Oxford, Stanford, and Cambridge ought to give this man some prizes right away. I like that to where I am very generous with the resources of great universities, resources, ultimately, that are not mine.
