1. MOTIVATED HABITUATION

My chess rating now is still a lackluster 1328.

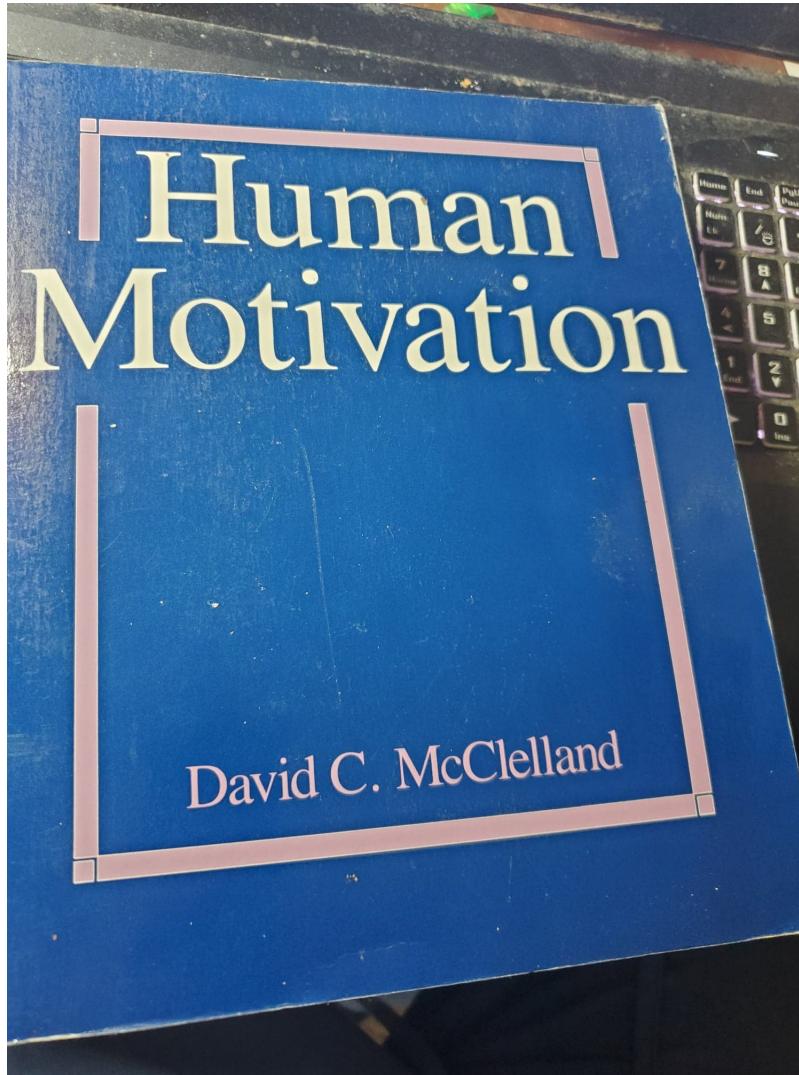

The issue that is most important for me is whether Universal Human Behaviour can be almost completely described by Motivated Habituation.

2. NEED TO ACHIEVE MOTIVE

David C. Mclelland's book pp. 223-267 addresses the Achievement motives of human beings.

Date: March 17, 2022.

I must say that I am not actually motivated to have high achievement in chess. My lackluster 1350 Puzzle Rating in Chess seems slow to change.

I wonder about this Need for Achievement motive. The interesting question is what is the serious need here, in my situation. I want responses from the top universities in the world for psychology, Harvard, Stanford, Oxford, and Cambridge, with a tenure decision and decision to fund me significantly.

So my real motivation is to get out of this miserable situation where Bill Gates is accosting me for over a year destroying and harming me physically with power maneuvers, has obstructed \$620 million, destroying my American Dream, and these universities are not delivering what I want for months and months and months. I have plans for Quantitative Positive Psychology with technology company held up for months because of this malevolent worthless con man racial murdering career criminal and pathological liar Bill Gates and for whatever reason impossible to fathom United States Government would rather violate the sacred charter of the

MARCH 16 8:19 PM ZULFIKAR MOINUDDIN AHMED RETURNS TO UNIVERSAL HUMAN PSYCHOLOGY OF MOTIVATED H

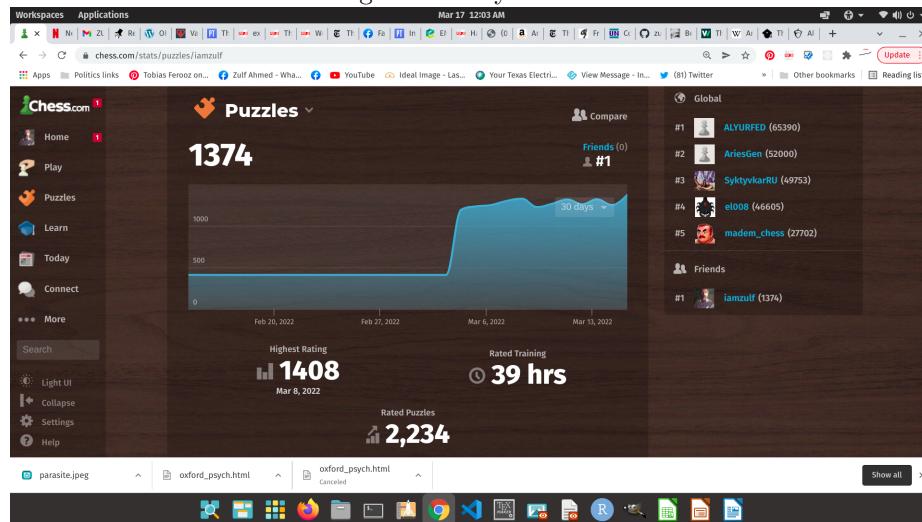

United States, break its contract with me that promises that they would secure my natural rights, and prefer that this nation is a barbaric lawless corrupt uncivilised nation rather than do what any civilised nation would do and destroy the malevolent worthless lowlife cunt Bill Gates. So what is my real motivation?

3. DECISION TO MASTER AP PSYCHOLOGY

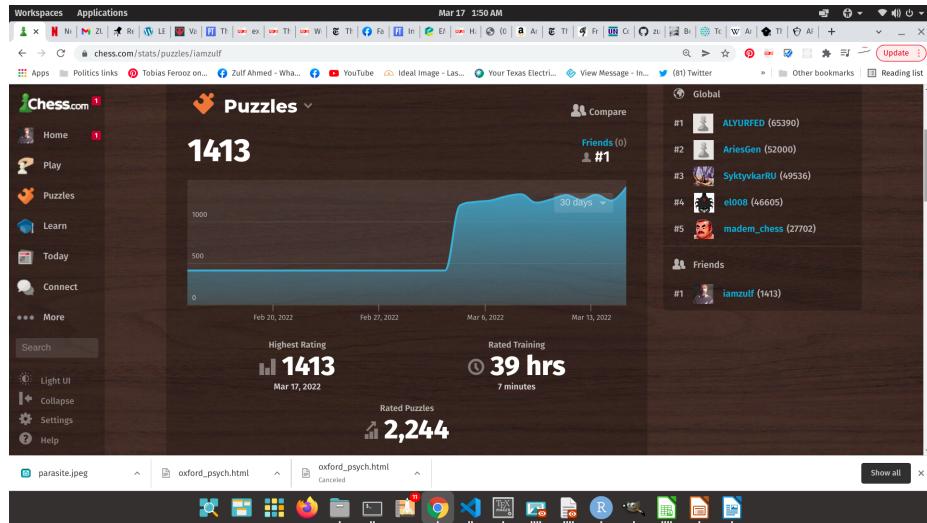

Since I studied Mathematics and Literature at Princeton 1991-1995, and since it is clear now that I am fully committed to a Natural Science Of Man as natural science, and since my great dream for my beloved people is the global uplifting of Life Satisfaction and Quantitative Positive Psychology, and since I was stellar during high school with Science AP examinations with 5 on Physics C and Calculus BC and Chemistry during 1988-1989, I have decided just to go through the material of AP Psychology now at 50 and just gain mastery of these topics by self-study. It might take a few months to a year but I just decided it is a productive way to gain fresh perspective and reinforce my own new ideas since AP level is broad survey and mastery is measured and standardised.

Obviously I am seeking *tenured full professorships* at Harvard, Stanford, Oxford and Cambridge still for my achievements and original work already accomplished.

I am never worried about embarrassing myself when delving into a subject where I do not have mastery at the AP level. I am an immortal genius already and have no worries or shame in addressing elementary material.

Finally short moments above 1400 and so I see there is slow progress concretely in my chess playing. Perhaps it is the chess playing that slowly convinced me that this idea of Motivated Habituation to explain Universal Human Behaviour is worth pursuing, and worth pursuing enough for me to gain a wider mastery of Psychology at the AP Psychology level.

With the short few years I have left for my life, I certainly feel that Quantitative Positive Psychology applications distributed to uplift Life Satisfaction of eight billion people is worthwhile. Am I going to be taking an efficient path by rushing to master AP Psychology? It's feasible. Who knows when, and even if, Harvard, Stanford, Oxford, and Cambridge will deliver tenure and funds. They have not actually done a goddam thing yet.

I do believe that Technology applications of Quantitative Positive Psychology will transform the world in ways even Siddhartha Gautama had not achieved. I am outraged beyond expression and words at United States Government for not destroying the malevolent worthless deranged evil-beyond-imagination genocidal hard-core racial murderer *Bill Gates*. But one must cope with one's fate, for as Demagorgon says regarding Prometheus, that Endurance and Hope are the virtues that lead to triumph against adversity. The world is not the way that we would like it to be. It is the way it is, and United States Government is not corrupting itself now for the first time. It was highly pro-white-racial-murderers throughout its history. After all the horrible racial genocide-fanatic Andrew Jackson was actually president once and is revered with his portrait in some of the currency.

4. WHY PSYCHOLOGY IS INTERESTING TO ME

My interest in psychology is not lifelong, not directly, anyway. I was interested in Mathematics and *Literature* in my younger student years. I increasingly became interested in psychology, which seemed always to be *those other people's claptrap* for most of my life after I was certain to have success with my fundamental physics work which was definitely a monumental effort of personal sacrifice of many years.

Natural Science of Man is what I turned to next, in the past five or six years, isolated from great centers of learning in America, in Allen Texas. I am listening to some of the lectures at Open Courseware for MIT's course on Introduction to Psychology now. I see that Psychology is introduced as *scientific study of Human Nature, Mind, and Behaviour*. This is very attractive to me, especially *Human Nature*. Several years ago, by a sort of Cartesian philosophical process, I had deduced that *Human Nature is extremely nontrivial* meaning that human beings have

extremely *restrictive* behaviour. This statement is vague, but it is absolutely unknown at least in the general population. I had not thought about this before. And I keep repeating that as organisms with constant genetic code G_c that accounts for 99.9% of everyone's genetic code, the restrictiveness of Human Nature is expected, and so it is interesting to have a *holistic understanding* of what features can fully characterise the restrictiveness of this human nature.

In the past several years I enthusiastically examined quite a few books on Human Nature to address this natural interest of mine.

This is a topic of great curiosity for mine, as although we can deduce clearly the existence of a restrictive Human Nature, I personally wanted to know the bounds of Human Nature clearly and holistically. I found nothing at all that would satiate my curiosity as there is an explosion of chaos and voluminous literature none of which seems to just give me a good solid clear answer to *What is Human Nature sharply characterised?*

Let me tell you the sort of answer I am looking for. Let \mathcal{H} represent all human beings with $|\mathcal{H}| \sim 10^{10}$. These are the currently existing human beings. I want a sequence of functionals f_1, \dots, f_P on \mathcal{H} that are roughly *constant* for all $h \in \mathcal{H}$ and they together will tell us what is human nature.

In other words, I want what is Universal Human Nature. One of the troubles with Psychology is the lack of precision in the field is such that one has to do voluminous reading to understand what people are trying to do. You need to learn the vocabulary anew for almost every different Psychologist so just understanding what is known and not is a gigantic project. I hate that.

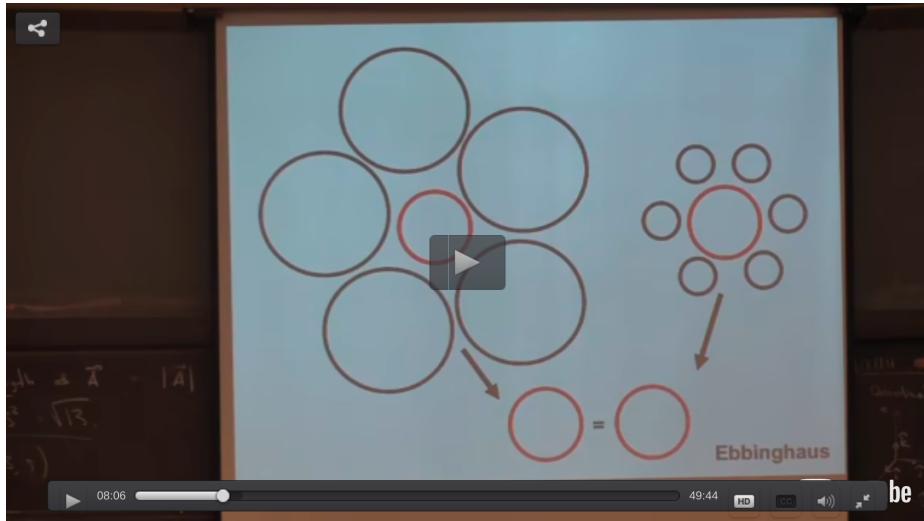

5. LET ZULF HANDLE EXISTENCE OF UNIVERSAL HUMAN NATURE

I understand all of Psychology is confused about *existence* of single Universal Human Nature. Well I proved the existence of Universal Human Moral Nature with World Values Survey, so this is concrete evidence of *some features* of Universal Human Nature, that around 95% of human beings are morally good on many values. But there will be far deeper foray into Universal Human Psychology because we can deduce the *existence* of Universal Human Psychology from the constant genetic code G_c in common that accounts for 99.9% of every single human beings' genetic code. This ought to be the first thing every single student learns about Psychology. And if no one else has made this deduction, I want this to be Zulfikar Moinuddin Ahmed's first law of Psychology in every goddam textbook for Psychology 101.

It's a different matter to fully characterise what Universal Human Nature is, and that is what is interesting for me. No wonder Psychology is Anarchy and Chaos. Psychologists didn't know the first thing about Universal Human Nature. Thankfully, I saved the world in this case.

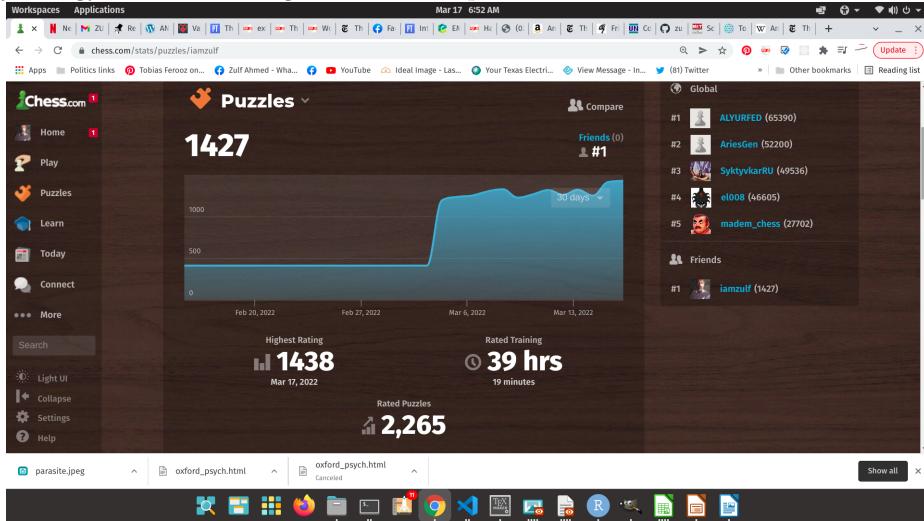

6. THE MIND'S INTERPRETATION OF SIZE IS HOLISTIC

From the MIT lecture, there is an interesting issue of our mind's interpretation of size includes the surroundings.

Some of these things of various biases of the mind for size and shading of colours and words these are interesting but I don't think they are so important at all. I don't understand why psychology does not develop more important issues first. These are fringe issues.

The most important central issue of Psychology is that our ordinary intuition is developed from Motivated Habituation. That is the most important issue of psychology, and these things are not so important.

That's good. I nudged up a little to 1427. I would be happy if for several weeks I stayed in the 1450-1550 range. Eleven days ago I was optimistic and thought my level was this but I have since realised that my game was weaker.

See, for whatever reason, 1427 feels like a respectable level at least. I feel pretty good that I am not forever stuck lower.

7. IS HUNCH THE BEST WAY TO GO IN AN EXAM?

This is an ill-defined question. I don't believe the evidence that says reviewing your hunch is better at all.

The question is the wrong one to ask. My Motivated Habituation theory would predict that for people who do not have a lot of practice, the second answer is slightly more likely to be right. For people who have obsessively practiced, the intuitive answer is better.

It's all about Motivated Habituation being able to provide improvements to Intuition for accuracy.

8. RORSCHACH TEST SHOULD BE REMOVED

I do not understand what is the value of useless baggage like Rorschach tests. Serious psychology should be based on a holistic theory of Universal Human Nature and Behaviour. What is this nonsense? The world needs serious people in Psychology not this junk.
